Computer Engineering Student

Department of Computer Engineering
Institut Teknologi Sepuluh Nopember

SUMMARY

Currently a 3rd-year Computer Engineering student with a strong focus on IoT laboratory studies, embedded systems, artificial intelligence, networking, and digital systems design. Interested in the integration of hardware and software to develop innovative Internet of Things (IoT) solutions.

EDUCATION

Computer Engineering 2024 – 2027 (expected)

Institut Teknologi Sepuluh Nopember, Surabaya – Bachelor of Engineering
GPA : 3.27

Natural Science 2020

SMAN 1 Kuta Utara, Badung – High School Diploma

WORK EXPERIENCE

BLSDM Komdigi Surabaya UPT. Kementrian Komdigi – Sidoarjo, East Java

AI Engineer Intern | Feb – Jul 2026

- Developed and deployed "Rumino," an AI-powered Knowledge Bot utilizing LLM and RAG architecture, to serve and interact directly with the general public.
- Achieved an 85% operational success rate and maintained a 90% training data accuracy metric, optimizing data retrieval through LlamaIndex and ChromaDB.

PROJECTS

Indoor Air Quality & Smart Environment System Odd 2025

Built a Flutter mobile application with Provider state management to visualize data from ESP32 sensors and Raspberry Pi. The system features AI-driven analysis to automatically trigger an Air Purifier and Humidifier. Additionally, designed and manufactured custom ergonomic enclosures for all electronic components using 3D modeling and printing.

Project link: <https://its.id/m/projectairquality>

Skills: Flutter (Provider), IoT Architecture (ESP32 & Raspberry Pi), AI Integration, C++ (Arduino), Fusion 360 (3D Design), 3D Printing.

Stridez Odd 2025

Developed a comprehensive mobile fitness application using Flutter and Dart designed to track user activity and running progress. Integrated Geolocator and Flutter Map for real-time GPS tracking and built a responsive UI for monitoring health metrics such as step counts, distance, and calorie burn.

Project link: <https://github.com/cndrdwynt/stridez-front.git>

Skills: Flutter, Dart, GPS API (Geolocator), OpenStreetMap (Flutter Map), UI/UX Implementation, State Management.

E-Rapor Even 2024

Complete academic management platform designed to streamline the evaluation process with a multi-level assessment hierarchy (chapters, parameters, sub-aspects). Implemented automated grade calculation with configurable weights, detailed error tracking per sub-aspect, and real-time pass/fail status determination for efficient academic reporting.

Project link: <https://github.com/cndrdwynt/kelompok-4b-project-eraport-basis-datat-.git>

Skills: Full-Stack Development, Database Management (CRUD Operations), Laravel, PHPMyAdmin.

Obstacle Avoidant Even 2024

Simulated robotic navigation and obstacle avoidance using sensors and programming logic.

Project link: <https://its.id/m/obstacle>

Skills: Microsoft Word, Webots, C++, Sensors, Robotics

Line Tracer Robots

Even 2024

Built line-tracing robots with microcontrollers and programmed control logic.

Project link: <https://its.id/m/linetracer>

Skills: ESP32, C/C++, Arduino IDE, Sensors

Ultrasonic Radar System with Range Finding Capability

Even 2024

Developed an ultrasonic radar system capable of measuring distance in real-time and transmitting data via network communication for IoT applications.

Project link: <https://its.id/m/radarsystem>

Skills: ESP32, Arduino IDE, Sensors, Embedded Systems

Flappy Bird Game Development

Odd 2024

Developed a Flappy Bird clone using algorithms and data structures for game mechanics.

Project link: <https://github.com/cndrdwynt/floppybird.git>

Skills: Python, Data Structures, Algorithms

E-Commerce Application UI/UX Prototype

Even 2024

Designed a UI/UX prototype for an online shopping platform with IoT integration.

Project link:

<https://www.figma.com/design/MZ52GdPChf22sybTQxAujW/Quick-Mart?node-id=0-1&t=mcJIWblRPQ12t1Al-1>

Skills: Figma

ORGANIZATION EXPERIENCE

IoT Laboratory

Aug 2025 – 2027

Laboratory Assistant

- Assisted in conducting IoT-related experiments and projects.
- Maintained and ensured the proper functioning of lab equipment.
- Facilitated hands-on learning experiences for students in the lab.

Student Executive Board (BEM) of the Faculty of Intelligent Electrical and Informatics Technology (FTEIC)

Feb – Nov 2025

Staff of Department of Foreign Affairs

- Served as a Project Officer responsible for coordinating benchmarking activities between FTEIC and other faculties.
- Facilitated communication and collaboration between faculty representatives to enhance interfaculty understanding.
- Ensured smooth flow of information and collaboration on academic and organizational matters.

EVENT MANAGEMENT & LEADERSHIP EXPERIENCE

INCLINATION 2025

June – Aug 2025

Head of Closing Event Subdivision

- Led the closing event team for INCLINATION 2025, overseeing the overall planning, coordination, and execution of the event.
- Handled logistics, including venue arrangement, speaker coordination, and participant engagement for the closing event.
- Successfully hosted the closing ceremony for 1300+ new students, ensuring the event was well-organized and impactful.

ITS EXPO 2024

May – Oct 2024

Staff Opening Event Sub-Division

- Served as the MC for Gigs ITS, guiding the flow of the event and engaging participants.
- Acted as Liaison Officer (LO) for internal and external stakeholders, including faculty staff and sponsors.
- Managed all technical aspects, including creating and coordinating the detailed rundown to ensure smooth execution.

MAGE X

May – Oct 2024

Staff Opening Event Sub-Division

- Involved in preparing all aspects of the competition, from conceptualizing the registration process to the conclusion of the event, including techniques, rules, and procedures.
- Assisted in coordinating event logistics, judging criteria, and technical support during competitions.
- Responsible for evaluating participant proposals and assessing competition performance in IoT, Robotics, and Game Development events.

ACHIEVEMENT

Top 30 Funded Team – HETI Student Youngpreneurship (SY) 2026

Secured startup funding and business mentoring through a competitive selection at ITS for developing "Storavest," an IoT-based smart agricultural warehouse system. This innovation helps farmers monitor real-time temperature and humidity to prevent crop spoilage, demonstrating high business potential and providing a technology-driven solution for the agricultural sector.

SKILLS

HARD SKILLS

Office

- Microsoft Word
- Microsoft Excel
- Microsoft Powerpoint
- Microsoft Outlook

Programming & Development

- Visual Studio Code
- Arduino IDE
- Webots

System Design & Prototyping

- Autodesk Fusion 360
- Figma

Programming Languages

- Python
- C / C++

SOFT SKILLS

- Problem Solving
- Teamwork
- Time Management
- Public Speaking
- Adaptable
- Critical Thinking
